

Mohammed Tareq

Laravel Developer | Full-Stack Web Engineer

mohtareq1999m@gmail.com • +20 115 141 0813 • Cairo, Egypt • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Detail-oriented Laravel Developer with a B.Sc. in Computer and Software Engineering and hands-on experience building scalable, efficient web applications. Proficient in full-stack development with deep expertise in Laravel, Livewire, and RESTful API design. Adept at delivering clean, maintainable code, adhering to best practices, and contributing to high-impact projects in agile environments.

TECHNICAL SKILLS

Languages	PHP, JavaScript, HTML, CSS
Frameworks & Libraries	Laravel, Livewire, Filament, Bootstrap, Node.js, Alpine.js, Tailwind CSS
Databases	MySQL, MongoDB
Web Technologies	AJAX, RESTful APIs, JSON
Version Control	Git, GitHub
Architecture & Methods	OOP, MVC, Repository-Service Pattern, Agile / Scrum
Performance & DevOps	Redis Caching, Yajra DataTables, Vite

EDUCATION

B.Sc. in Computer and Software Engineering
Misr University for Science and Technology (MUST)

Graduated 2023

PROJECTS

E-Commerce Platform (Enterprise-Grade)

2024 – Present

Personal Project • Status: Active Development

- Implemented a Repository-Service design pattern with Laravel 12, PHP 8.2+, and Livewire 3.7 for reactive UI components.
- Engineered secure OTP-based authentication with email verification and role-based access control.
- Built a dynamic product engine supporting variants, multi-image management, and hierarchical categories.
- Integrated full multi-language support (EN / AR) with RTL layout compatibility and cascading location-based shipping.
- Optimised performance with Redis caching and Yajra DataTables server-side processing.
- Stack: Laravel 12, PHP 8.2+, Livewire 3.7, Tailwind CSS 4, Alpine.js, MySQL, Redis.

Laravel POS System – Full Stack

2024

Personal Project

- Architected a high-performance Point of Sale system with real-time inventory synchronisation using Laravel 12, Livewire 3, and Filament 4.
- Built a reactive checkout interface with real-time cart calculations, 15% automated tax processing, and UUID-based SKU generation.
- Implemented Two-Factor Authentication (2FA) via Laravel Fortify and RBAC to protect sensitive business data.
- Developed automated PDF receipt generation and comprehensive sales analytics reporting.
- Stack: PHP 8.2+, Laravel 12, Livewire 3, Filament 4, TailwindCSS 4, MySQL, Laravel Fortify, Vite.

Laravel Blog System – Full Stack2023

Personal Project

- Developed a scalable blog platform with admin panel, RBAC, real-time notifications (Pusher), and SEO optimisation.
- Integrated Redis caching and AJAX interactions for improved performance and seamless UX.
- Applied clean architecture principles with modular code and secure 'remember me' authentication.
- Stack: Laravel, MySQL, Redis, Bootstrap, AJAX, Pusher, PHP Flasher.

Doctor Appointment Booking System2023

Personal Project

- Delivered a full-stack platform with separate portals for doctors and patients.
- Implemented a flexible booking engine with advanced search by specialty and location.
- Integrated Stripe API for secure, automated online payment processing.
- Designed an intuitive UI for managing appointments, doctor profiles, and patient reviews.
